

## How the hanging system with the display panels work:

See below the picture of the S hooks and chain below.

You hang a large S hook over the top of the display panel, then hang the chain from the S hook. You can buy metal or plastic chain. Then you use smaller S hooks to hang your artwork at the height required. You will need more smaller hooks and only 2 – 4 larger hooks.

I think last year the cheapest place to get the S hooks from was Wilco, but I've brought some from Yorkshire Trading co - anywhere cheap really. Chain is around £2.50 per mtr from any hardware store. You do not need the length of chain to go to the floor – just 1 mtr / 1.3 should be sufficient.

You can see on the 2nd picture - some people use two rows to hang work and others use only one - I guess 2 rows you know it will stay straight!
